Nbr Earths Required: This represents the number of planet Earths that would be required if everyone in the world lived the average lifestyle of a resident in this country.

Number of Countries Required: This represents how many times the country's biocapacity is needed in order to provide for the country's consumption Footprint.

Note that these numbers assume people use biocapacity fully. However, wild species also require biologically productive space.

When subtracting a portion of biocapacity for wild species, the ratios get larger.
